Features

- High stability control
- Up to twenty programs
- 16 ramp/dwell segments
- Heating and cooling
- Motorised Valve output
- Customised operation
- Load diagnostics
- Heater current display
- Multiple alarms on a single output
- One-shot tuner with overshoot inhibition
- 24V Supply option
- Auto/manual button
- DC retransmission
- 10amp output (2404 only)
- Transmitter/strain gauge supplies
- PDSIO master setpoint retransmission or setpoint input
- Digital communications
- Plug-in from front
- Compliant with European EMC and low voltage safety directives
- 3 Year warranty

The 2404/2408 is a versatile, high stability temperature or process controller, with self and adaptive tuning, in 1/4 DIN and 1/8 DIN sizes. It comes with a standard 8 segment setpoint programmer, with options for one, four or twenty programs of 16 segments each. It has a modular hardware construction which accommodates a wide range of plug-in modules. It will accept up to three I/O modules and two communication modules. Two Digital inputs and an optional alarm relay are included as part of the fixed hardware build. The hardware is configurable for heating, cooling, alarms and other functions. Transmitter and strain gauge power supply options are available. The 2404/2408 is fully configurable on-site.

The programmer can have up to 8 programmable outputs which can be set in each segment to trigger external events. The two digital inputs can be used to run, hold and reset the program. Parallel operation of several programmers can be performed with synchronisation chosen at the end of any desired segments.

Precise control

An advanced PID control algorithm gives stable 'Straight-line' control of the process. A one-shot tuner is provided to set up the initial PID values and to calculate the overshoot inhibition parameters. In addition an adaptive tuner will handle processes with continually changing characteristics. On electrically heated loads, power feedback is used to stabilise the output power and hence the controlled temperature against supply voltage fluctuations. Dedicated cooling algorithms ensure optimum control of fan, water and oil cooled systems.

Universal input

A universal input circuit with an advanced analogue to digital convertor samples the input at 9Hz and continuously corrects it for drift. This gives high stability and rapid response to process changes. High noise immunity is achieved by rejection of 50/60Hz pick-up and other sources of noise. Sensor diagnostics are also provided. The input will accept all standard thermocouples, the Pt100 resistance thermometer and linear millivolts, milliamps or DC volts. Input filtering from OFF to 999.9 seconds is included.

Customised operation

A custom LED display provides a bright, clear display of the process value and setpoint. Tactile push buttons ensure positive operation. Access to other parameters is simple and easy to understand and can be customised to present only those parameters that need to be viewed or adjusted. All other parameters are locked away under password protection. A front panel auto/manual button is provided.

Alarms

Up to four process alarms can be combined onto a single output. They can be full scale high or low, deviation from setpoint, rate of change or load failure alarms. Alarms messages are flashed on the main display. Alarms can be configured as latching or non-latching and also as 'blocking' type alarms which means that they will become active only after they have first entered a safe state.

Digital communications

Available with either EIA485 2 wire, 4 wire or EIA232. With industry-standard protocols including: Modbus®, Eurotherm Bisync, and SPI.

PDSIO Load diagnostic

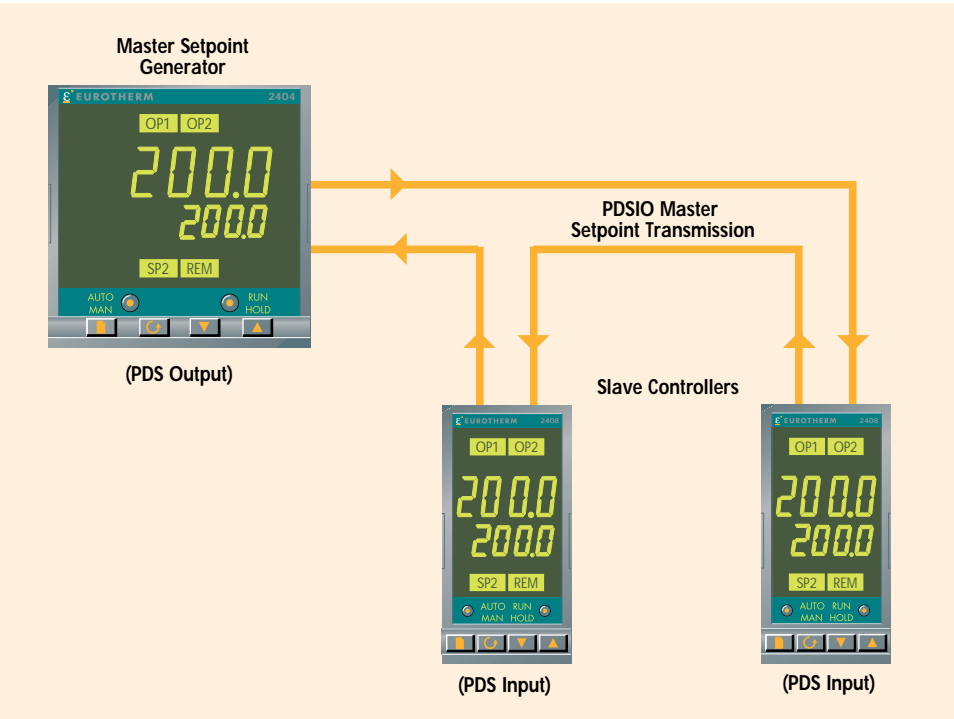

PDSIO Load diagnostics

PDSIO (Pulse Density Signalling I/O) is a major innovation in the 2404/2408. When used in combination with a Eurotherm TE10 solid state relay (SSR), it allows the logic output of a 2404/2408 to transmit the power demand signal and simultaneously read back load fault alarms. These alarms will be flashed as messages on the controller front panel.

Two alarm conditions will be detected, either SSR failure indicating an open or short circuit condition in the SSR and heater circuit failure indicating either fuse failure, heater open circuit or line supply absent.

PDSIO Setpoint transmission

PDSIO master setpoint transmission

PDSIO can be used to digitally transmit the setpoint profile to a number of slave Series 2000 controllers.

If any slave zone departs from the required setpoint by more than a pre-settable amount, a signal from any slave can be transmitted back to the master causing the program to freeze until the error is corrected. Digital accuracy is preserved using PDSIO.

Technical specification

Inputs

General	Range	$\pm 100\text{mV}$ and 0 to 10Vdc (auto ranging)
	Sample rate	9Hz (110ms)
	Calibration accuracy	0.2% of reading, ± 1 LSD or $\pm 1^\circ\text{C}/\text{F}$
	Resolution	$< 1\mu\text{V}$ for $\pm 100\text{mV}$ range, $< 0.2\text{mV}$ for 10Vdc range
	Linearisation accuracy	No discernable error
	Zero drift with ambient temperature	$< 0.1\mu\text{V}$ per $^\circ\text{C}$ for $\pm 100\text{mV}$ range, 0.1mV per $^\circ\text{C}$ on 10Vdc range
	Gain drift with ambient temperature	$< 0.004\%$ of reading per $^\circ\text{C}$
	Input filter	OFF to 999.9secs
	Zero and span offset	User adjustable over the full display range
Thermocouple	Types	See sensor inputs table
	Cold junction compensation	Automatic compensation typically > 30 to 1 rejection of ambient temperature change External references 0, 45 and 50°C
RTD/PT100	Type	3-wire, Pt100
	Bulb current	0.2mA
	Lead compensation	No error for up to 22 ohms balanced in all 3 leads
Process	Range	$\pm 100\text{mV}$, 0 to 20mA or 0 to 10Vdc (All configurable between limits)
	Type	Linear, Square root or custom 8 point
	Application	Process value, remote setpoint, setpoint trim, power limit. Value pos. slidewire 330Ω to 15Kohm
Digital	Type	Single and triple input: Contact closure or 24Vdc logic input
	Application	Manual select, 2nd setpoint, 2nd PID, keylock, setpoint rate limit enable, Program run, hold, reset, synchronisation and fast run

Outputs

Relay	Rating: 2-pin relay	Min: 12V, 100mA dc. Max: 2A, 264Vac resistive (single and dual modules available)
	Rating: change-over, alarm relays	Min: 6V, 1mA dc. Max: 2A, 264Vac resistive
	Application	Heating, cooling, alarms or program event
Logic	Rating	18Vdc at 24mA (isolated and non-isolated versions available)
	Application	Heating, cooling, alarms or program event PDSIO mode 1: Logic heating with load failure alarm PDSIO mode 2: Logic heating with load/SSR failure alarm and load current display
	Rating	1A, 30 to 264Vac resistive (single and dual modules available)
Triac	Application	Heating, cooling or program event
	Rating	10amp, 264Vac resistive
High Current	Application	Heating (2404 only)
	Rating	0 to 20mA (into 600Ω max) or 0 to 10Vdc (Isolated and non-isolated versions available)
Analogue	Application	Heating or cooling or process output. PV retransmission or setpoint retransmission
	Rating	24Vdc at 20mA
Transmitter supply	Rating	10Vdc. Minimum bridge resistance: 300Ω
Strain gauge supply	Rating	10Vdc. Minimum bridge resistance: 300Ω

Communications

Digital	Transmission standard	EIA 485 or EIA232 at 1200, 2400, 4800, 9600, 19,200 baud
	Protocols	Modbus® or Eurotherm Bisync or SPI
PDSIO	Setpoint input	Setpoint input from master PDSIO controller. Holdback to master controller
	Setpoint output	Master setpoint retransmission to slave PDSIO controllers

Control functions

Control	Modes	PID or PI with overshoot inhibition, PD, P only or On/Off
	Application	Heating, cooling or process output
	Auto/manual	Bumpless transfer or forced manual output
	Setpoint rate limit	OFF to 999.9 degrees or display units per second, minute or hour
	Cooling algorithms	Linear; Water (non-linear); Fan (minimum on time), Oil and proportional only
Tuning	One-shot tune	Automatic calculation of PID and overshoot inhibition parameters
	Adaptive Tune	Continuous assessment of the PID values
	Automatic droop compensation	Automatic calculation of manual reset value when using PD control
Alarms	Types	Full scale high or low. Deviation high, low, or band. Rate of change
	Modes	Latching or non-latching. Normal or blocking action
		Up to four process alarms can be combined onto a single output

Programmer parameters

	Programs	One, up to four or up to twenty programs
	Segments	16 segments per program
	Ramp	Ramp Rate or Time to Target Hours, Minutes or Seconds (0.1 to 999.9)
	Dwell	Hours, Minutes or Seconds (0.0 to 999.9)
	Holdback	Per Program or per Segment (0.0 to 999.9)
	End Segment	Dwell, Reset or Set output level
	Cycles	Continuous or 1 to 999
	Event outputs	Up to eight – relay, logic or triac

General

	Display	Dual, 4 digit x 7 segment high intensity LED
	Dimensions & weight	96W x 96H x 150D mm. 600g
	Supply	85 to 264Vac, 48 to 62Hz. 10watts max (or 20 to 29Vac or dc)
	Temperature and RH	Operating: 0 to 55°C, RH: 5 to 95% non-condensing. Storage: -10 to 70°C
	Panel sealing	IP54
	Electromagnetic compatibility	Meets generic emissions standard EN50081-2 for industrial environments Meets general immunity requirements of EN50082-2(95) for industrial environments
	Safety standards	EN61010, installation category 2. (voltage transients must not exceed 2.5kV)
	Atmospheres	Electrically conductive pollution must be excluded from the cabinet in which this controller is mounted. This product is not suitable for use above 2000m or in corrosive or explosive atmospheres without further protection.
